

What is Modawake 200mg Tablet?

Modawake 200mg is a prescription medicine widely used to treat various sleep disorders- be it narcolepsy, obstructive sleep apnea, shift work sleep disorder, etc. It consists of the FDA approved drug named Modafinil. It belongs to the class of medications called 'nootropic', also known as smart drugs. It improves cognitive functions and is therefore popular with people who need to concentrate on work/study for long hours. It has various off-label usages and hence has gained popularity in the market. It is prescribed to patients who have ADHD. Modawake is a generic version of Modafinil, which is manufactured by the reputed pharmaceutical HAB Pharma.

How Does Modawake 200mg Treat Sleeping Disorders?

Modawake (Modafinil) 200mg is the perfect suitable dose for enhancing wakefulness in people working with excessive day time sleepiness. The actual way of the working of this medication is still in the dark, but it certainly provides outstanding results. Various studies have shown that this medication impacts the re-uptake of neurotransmitters (dopamine). Modawake 200mg gets dissociated into its chemical component Modafinil that has a large effect on these chemicals and thus succeeds in maintaining one's alertness in the daytime. For memory enhancement, the mechanism of this medication works by increasing the blood circulation to the brain.

How and When to Take Modawake 200mg Tablet?

The usual and most commonly prescribed dosage for Modawake is taking one tablet of Modawake 200mg once in the morning. It can be taken with or without food. Eating before taking a Modawake pill does not significantly affect its absorption rate in the body. Talk to your doctor to know more about dosage and consumption guidelines.

Dizziness is a common side effect that can occur after consuming this tablet. Thus do not drive a car or do any heavy machinery work after taking this medication.

FAQs

What happens if I miss a dose?

Talk with your doctor about what to do on the occasion of a missed dose of Modawake. Avoid taking the Modawake tablet if you do not plan to be awake for several hours. You can skip the missed dose if it is almost bedtime. Do not take an extra dose to make up for the missed one.

What other drugs will affect Modafinil (Modawake 200mg)?

Other drugs may interact with Modafinil, including prescription and over-the-counter medicines, vitamins, and herbal products. Tell each of your health care providers about all medicines you currently use and any medicine you may start or stop using.

What happens if I overdose?

In case of severe symptoms of overdose, seek emergency medical attention or call the Poison Help line number at 1-800-222-1222.

Does Modafinil (Modawake 200mg) affect eyesight?

Modafinil can cause blurred vision or dizziness in some people and therefore it may affect your ability to drive or use heavy tools or machinery, so avoid using them when under the influence of this medicine. Sleepiness associated with your condition can add to this. Taking modafinil is not a replacement for a good sleep routine.
